

AI Resume Analysis Report

Generated: January 18, 2026

ATS Score

72.5% (Good Match)

Skills to Develop

Docker, AWS, Kubernetes, GraphQL, PostgreSQL, Communication, Agile

Learning Roadmap

Docker

Master Docker fundamentals: containerization, images, containers, docker-compose, networking. Build and deploy containerized applications.

AWS

Learn AWS core services: EC2, S3, RDS, IAM, Lambda. Understand cloud architecture and best practices for scalable deployments.

Kubernetes

Master Kubernetes: pods, deployments, services, ingress. Learn container orchestration for production-grade applications.

GraphQL

Learn GraphQL fundamentals: schema design, queries, mutations. Understand how to build efficient APIs compared to REST.

Postgresql

Deepen PostgreSQL skills: advanced queries, indexing, optimization, and database design patterns.

Career Development Insights

- Your resume demonstrates strong foundational skills in web development with React and modern JavaScript.
- Focus on containerization and cloud technologies (Docker, AWS) to advance to senior positions.
- Add more measurable achievements and metrics to your accomplishments.
- Consider contributing to open-source DevOps projects to build cloud expertise.
- Improve communication and leadership experience through team projects and mentoring.
